

LUCAS VAZQUEZ

Platform / DevOps / SRE Engineer

vazquez.lucas.alejo@gmail.com  [lucas-a-vazquez](#)  [VazquezLucasA](#)

PROFESSIONAL SUMMARY

Platform engineer who owns the full technology stack of a regional fiber ISP — bare metal, virtualization, networking, and the 16-service application platform running on top of it — serving 15,000 subscribers and ~100 employees. Built the private cloud, the observability and disaster-recovery layers, and the delivery pipeline that ships to production with a 99.99% success rate. Equally at home on-premise (Proxmox VE, Debian, Nginx) and cloud-native (Cloudflare Workers/D1/R2, Oracle Cloud). Hired and lead a second engineer. Looking for a DevOps, SRE, or Platform Engineering role.

SKILLS

- **Cloud & serverless** — Cloudflare (Workers with Hono, D1, R2, Tunnels, DNS), Oracle Cloud Infrastructure, Hyperdrive
- **Infrastructure & virtualization** — Proxmox VE, Proxmox Backup Server, Dell PowerEdge (iDRAC, RAID, hot spares), Debian/Ubuntu, Docker, MinIO / S3-compatible object storage
- **Networking** — Nginx (reverse proxy, TLS termination, WebSockets), API gateway design, WireGuard, Tailscale, Cloudflare Tunnels, DNS/DHCP, MikroTik RouterOS API, GPON/OLT, TR-069 (GenieACS)
- **Automation & delivery** — Bash, Git, CI/CD pipelines, staging→production promotion, automated backup and restore, n8n
- **Observability** — Zabbix, Grafana, Uptime Kuma, Gotify alerting
- **Backend & data** — Node.js, Express, Hono, TypeScript/JavaScript, PostgreSQL, MySQL/MariaDB, REST API design, RBAC and session-based auth
- **Frontend** — React, Vite

WORK EXPERIENCE

Dovanet — Platform & Infrastructure Engineer

Regional fiber ISP · 15,000 subscribers · Tucumán, Argentina **Jan 2024 – Present**

- Own the ISP's production platform end to end: 4 bare-metal Dell PowerEdge nodes (iDRAC, RAID, hot spares), Proxmox VE hypervisors and a Proxmox Backup Server, and 18+ production services — from OS install through on-call.
- Architected and built the in-house OSS/BSS replacing a legacy PHP monolith: 16 Node.js/Express microservices behind an API gateway with a React/Vite frontend, covering CRM, inventory and logistics across 6 cities and 2 countries, service provisioning, ticketing, field-technician workflows, payroll, and analytics.
- Built the delivery pipeline: isolated staging environment, automated unit tests, and single-command promotion to production — 99.9% successful deploys.
- Engineered the entire public surface behind a **single public IP**: Nginx reverse proxy with TLS termination and WebSocket support across 6+ domains, plus WireGuard, Tailscale, and Cloudflare Tunnels for internal and vendor access. No additional address allocation required.

- Automated subscriber provisioning: real-time ONT management via TR-069/GenieACS, MikroTik RouterOS API, and direct OLT access, replacing a manual per-customer CLI process with a web panel.
- Own observability and DR: Zabbix and Uptime Kuma across every VM, Grafana dashboards, Gotify alerting, and automated backups of all production databases and virtual machines with tested restores.
- Migrated customer messaging to the WhatsApp Cloud API with **zero downtime**, and built a Chatwoot + n8n first-line support bot with automated agent routing and load balancing.
- Hired and mentor one engineer; introduced Git workflow, code review, and staging-first delivery.

TUCUMIND — Co-Founder & Technical Lead

Software consultancy · Tucumán, Argentina **Jun 2025 – Present**

- Own architecture and delivery across all client engagements, from infrastructure to application code.
- Standardized delivery on a serverless stack: Cloudflare Workers (Hono, TypeScript), D1 and R2, with PostgreSQL on Oracle Cloud connected via Hyperdrive.

Freelance — IT Infrastructure & Support

Tucumán, Argentina **2015 – 2024**

- Linux and Windows systems administration, network configuration, and hardware for small businesses.

EDUCATION

- Universidad Tecnológica Nacional (UTN-FRT) — Tecnicatura Universitaria en Programación (Associate Degree, Computer Science)
- IBM SkillsBuild + Guayerd — Data Analytics: Power BI, Looker Studio, MySQL, Excel (2024)
- English — EFSET C1 (2024); Aticana B2 (2019–2020)
